

PATENT
Docket GE133636

In the Specification

Please substitute the following paragraph for the corresponding paragraph being amended:

[0042] ~~the~~ The three cooling circuits may have various configurations within the available space provided in their respective portions of the airfoil. For example, the first circuit 32 also includes a first or leading edge outlet channel 58 as shown in Figures 3 and 4 which extends in radial span directly behind the leading edge 24. The first outlet channel 58 is separated from the first inlet channel 40 by a perforate cold wall or bridge 60 to provide impingement cooling of the inside of the leading edge 24 in a conventional manner.
